DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: The specification refers to claims by number. This is not permitted as the content of the claims can change or they can be canceled, as is the present case.

Appropriate correction is required.

2. A substitute specification in proper idiomatic English and in compliance with 37 CFR 1.52(a) and (b) is required. The substitute specification filed must be accompanied by a statement that it contains no new matter.

Drawings

3. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: heating device 91 mentioned at page 8, line 1. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 28, 29, 38-40, 42 and 44 are rejected under 35 U.S.C. 102(b) as being anticipated by EP 1059106.

6. The reference discloses a process and apparatus of electrostatic spinning that includes a cylindrical rotating charged electrode immersed in a polymer solution (Fig. 5), a counter electrode (102a, 102b, 102c, Fig. 8), and a nanofiber storage device (104, Fig. 8) that is pervious to air. See also paragraphs 0018, 0021, 0027, 0070, 0108, and 0112.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein

were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

9. Claim 41 is rejected under 35 U.S.C. 103(a) as being unpatentable over EP 1059106.

10. The reference is described above. The reference does not disclose that the charged electrode is a prism. It would have been obvious to one of ordinary skill in the art to use a prism instead of a cylinder as either shape will perform the function of removing a portion of the polymer from the supply in a thin layer to allow production of the fibers.

Allowable Subject Matter

11. Claims 30-37, 43 and 45-53 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

12. The following is a statement of reasons for the indication of allowable subject matter: The prior art does not suggest using a vacuum to direct the fibers in an electrostatic spinning process or apparatus.
